Integrations are fostering seamless flows of information across business applications and define how payments solutions work in a complex environment.

MuleSoft

Superior platforms find the optimal balance between delivering services to clients directly, delivering via partnerships, and enabling third parties to bring about changes over a platform through APIs.

As the payment industry grapples with providing resilient and reliable services to hyper-connected customers, MuleSoft and Opus aim to help industry leaders cut through the hysteria and move to digital solutions built for tomorrow, to deliver seamless customer experiences.

MuleSoft for Payments

1. Modernization of Infrastructure and Operational Efficiency.

An API-led and cloud approach for infrastructure and data increases resiliency, scalability, and customer value for payments. When improperly developed or managed, integrations and APIs run the risk of being irrelevant, non- reusable, lacking security, or out of sight with organizational goals.

2. Transformation in Payments Products and Solutions.

As any organization focuses on individual product and solution value and market quality, a plan on how that solution integrates to ancillary solutions and systems is vital. By deploying a standard platform for development, management, updates, and speed to market, companies can shift focus from the IT behind a product to the value the product delivers to their customers.
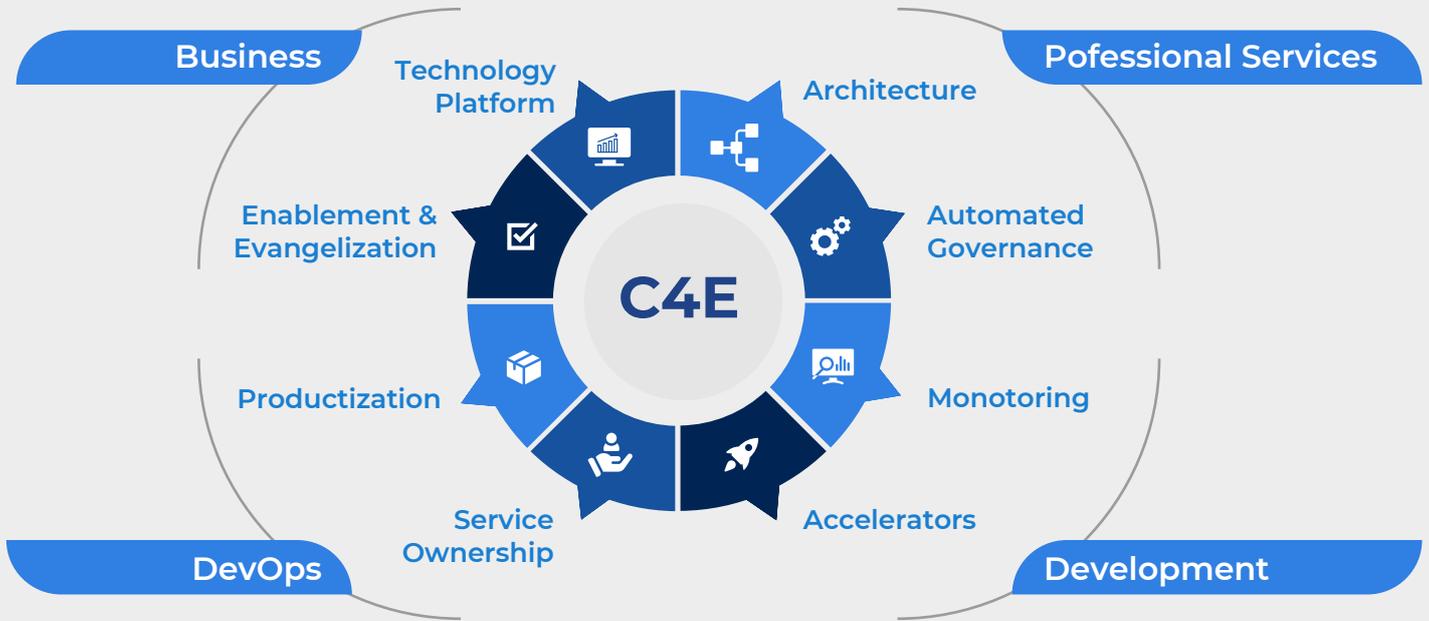

3. Defining Value in Payments.

Cloud and Integrations in Payments (Issuing/Acquiring/Processing) is quickly becoming a key area for organizations to find hidden value, by unlocking ways to branch out to new offerings and services utilizing digital.   MuleSoft enables this value to be realized faster and supports future advancements and growth.

4. Enabling Companies to Excel in Payments

MuleSoft's Center for Enablement (C4E), combined with Opus' processes for API Governance and Management, allow fintech and payments organizations to maximize success and productivity around API usage and product integration

The MuleSoft Anypoint Platform

The most advanced enterprise platform for designing, developing, and managing APIs and Integrations.

Accelerated Delivery
Fast to start, faster over time

Automated Security
Security and governance by default

Resilient Operations
Built-in reliability, scalability, & visbility

Future-Proof Foundation
Flexible and built for change

Vertical Focus and Payment Accelerators

- Card Issuance and Management
- ACH
- Switch
- Processing and Transactions
- Fraud, Risk, Compliance, AML, and Security
- Reconciliation
- Payment Gateways/Payment Facilitators/Networks & Processors
- Omni-channel Integration

Service Areas

Integration Consulting & Advisory

· Platform Assessment and Evaluation
· MuleSoft roadmap definition with Payments defined environments
· Center for Enablement (C4E) operational strategies for API/integration practice and governance
· Security, risk, fraud, and compliance assessments against API usage and standards

Design & Blueprint

· Define business objectives & business model using MuleSoft AnyPoint Platform
· Design, build, and deploy APIs for integrated systems, data, and solutions
· Validate API blueprint, define protocols and resources for APIs

Deployment and Customization

· Develop and deployreusable APIs aligned to business goals and end-user experience
· Build architectural layers for maximized efficiencies
· Create model for expansion and scaling within payments solutions, using MuleSoft
  AnyPoint platform and methodologies
